The **EPIC** Replaceable Insert Kit is superior to traditional repair kits for poppet style check valves that utilize individual components. This pre-assembled replacement check mechanism eliminates the need to assemble individual checking components, creating an efficient and economical method of effectively rebuilding the entire check mechanism (if an application requires). Simply unscrew the two threaded body pieces, remove the one-piece Replaceable Insert and two sealing O-rings, replace with new insert and O-rings, and refasten the body pieces.

The Replaceable Insert Kit is made of 300 series stainless steel and is supplied assembled with both body and insert O-ring seals included.
